EXPERIENCE

Full-Stack Engineer

August 2025 – Present

Rumor — consumer events platform, 50k+ active users

New York, NY

- Built a real-time email analytics pipeline processing 100k+ monthly emails, ingesting provider webhook events, aggregating delivery, open, and engagement metrics, and surfacing them live to event organizers
- Designed and shipped an event-driven activity feed backend processing over 1M events per month: Terraform-provisioned SNS/SQS FIFO ingest from Express and Lambda producers into an append-only ledger
- Migrated the web app from Next.js 13 to 16 and the mobile app from bare React Native to Expo, cutting page load times by 35% and cold start times by 40% while eliminating manual native project maintenance

Founding Engineer

December 2024 – March 2026

Squib — AI social media platform for marketing agencies

Bloomington, IN - NYC

- Built the platform from initial commit to production using Next.js, TypeScript, and PostgreSQL, deploying AI personas that generate content in each client's voice across multiple social platforms
- Designed a custom AI agent framework after ElizaOS hit ceilings on multi-channel autonomy, adding trend analysis, content generation, and human approval workflows for paying customers
- Architected multi-tenant infrastructure with client onboarding pipelines, OAuth integrations, and per-client analytics dashboards
- Led a full frontend and backend overhaul while maintaining 99% uptime for paying customers, cutting incident rate by 75% and server costs by 20% while removing long-standing technical debt

Full-Stack Engineer

May 2021 – March 2022

Artesian Builds — custom gaming PC manufacturer, built live on Twitch

Oakland, CA

- Developed internal tooling using Python and PostgreSQL to track Twitch.tv content creator metrics in real time, enabling data-driven prospecting and a 32% increase in affiliate recruitment

EDUCATION

Luddy School of Informatics, Indiana University

Bloomington, IN

Bachelor of Science in Computer Science

Aug. 2022 – May 2026

PROJECTS

Fuzzbox | *Next.js 16, Expo 56, tRPC, Supabase, TypeScript*

- Built a platform for guitar players to improve and share their playing, including a chord analysis engine in pure TypeScript that tests pitch classes against 43 chord templates, handles enharmonic ambiguity and edge cases like diminished symmetry and Hendrix 7#9 voicings, and returns ranked interpretations in real time

Meridian | *Vanilla TypeScript, Chrome Extension APIs, IndexedDB*

- Built a fully featured Chrome extension new tab app shipping in a 300kb bundle, with 11 feature modules in vanilla TypeScript and zero npm dependencies — including a custom drag-and-drop system, fully client-side gaussian heatmap recommendation engine, reactive storage layer, and full UI component library

Dispatch | *Astro 6, Claude API, GitHub Actions, Supabase*

- Built a six-stage AI content pipeline that publishes a daily article plus a weekly deep dive into a topic from that week, spanning deep topic research, long-form drafting, self-editing review, and multi-source image selection

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Python, Swift, SQL (PostgreSQL), C, C++, Java, HolyC

Frameworks & Tools: React, React Native, Node.js, Next.js, Express, Claude/OpenAI APIs, TypeORM, Zod, Jest, Vitest, Maestro, Docker, Terraform, AWS (ECS, Lambda, SNS, SQS), NGINX, GitHub Actions, Git, Astro, Electron

Concepts: RESTful APIs, Event-Driven Architecture, Distributed Systems, Database Design, Test-Driven Development, Scalable Services

Other Interests: Hiking, Guitar, Running, VW Auto Group cars (specifically 2016 GTI), Rocket League
